

Changes to LSA Document #11-102 from Preliminary Adoption to Final Adoption

1. Eliminated the following definitions:
 - a. CAUTI (formerly sec. 2)
 - b. CLABSI (formerly sec.4)
 - c. Central line catheter (formerly sec.5)
 - d. *C. diff* (formerly sec. 6)
 - e. ICU (formerly sec. 8)
 - f. MRSA (formerly sec. 9)
 - g. SSI (formerly sec. 11)
 - h. VAP (formerly sec. 12)

Based upon comments from Indiana APIC and the Indiana Hospital Association (Spencer Grover).

2. In general, I removed the hyphen between “care” and “associated” as that is the way that CDC presents the word. I also combined “health” and “care” as that is the way it is used in the industry and with CDC in this instance.
3. Section 10 (now Section 4), the definition of NHSN, has been changed to the wording suggested by the Indiana APIC and the Indiana Hospital Association (Spencer Grover).
4. Section 13 (now Section 5) was changed to add the word “hospital” before the word “locations” for clarification and the section number in the sentence was changed because of renumbering issues.
5. Section 14 (now Section 6) was changed by substituting the word “enroll” for “participate”, correcting the section reference because of renumbering issues and using the “confer” language suggested by Spencer Grover of the Indiana Hospital Association. The enrollment date was changed from January 1 to January 31 to allow more time for enrollment.
6. Section 15 (now section 7) was changed to mirror the CMS requirements for hospital reporting of healthcare associated infections as suggested by Indiana APIC, all the other commenters, and Spencer Grover of the Indiana Hospital Association.
